Math 406 Homework 2

Xander Naumenko

10/10/23

Question 1. See tables 1, 2, 3, 4 and 5 for the required tables. For the log-log plots see figures 1, 2, 3, 4 and 5.

The code for this question can be seen here:

```
disp('midpoint')
numerical_integration(-1, 1, @(x) 1/(1+x^2)^0.5, 32, 1);
disp('trap')
numerical_integration(-1, 1, @(x) 1/(1+x^2)^0.5, 32, 2);
disp('simpson')
numerical_integration(-1, 1, @(x) 1/(1+x^2)^0.5, 32, 3);
disp('gauss_legendre')
numerical_integration(-1, 1, @(x) 1/(1+x^2)^0.5, 32, 4);
disp('real')
% -2*log(2^0.5-1)

functions = {@(x) 1/(1+x^2)^0.5, @(x) sin(2*x)^2, @(x) x^(4.0/3), @(x) x^(1.0/3), @
bounds = [-1,1; 0,pi; 0,1; 0,2; 0,1];

Table 5: Question 1e

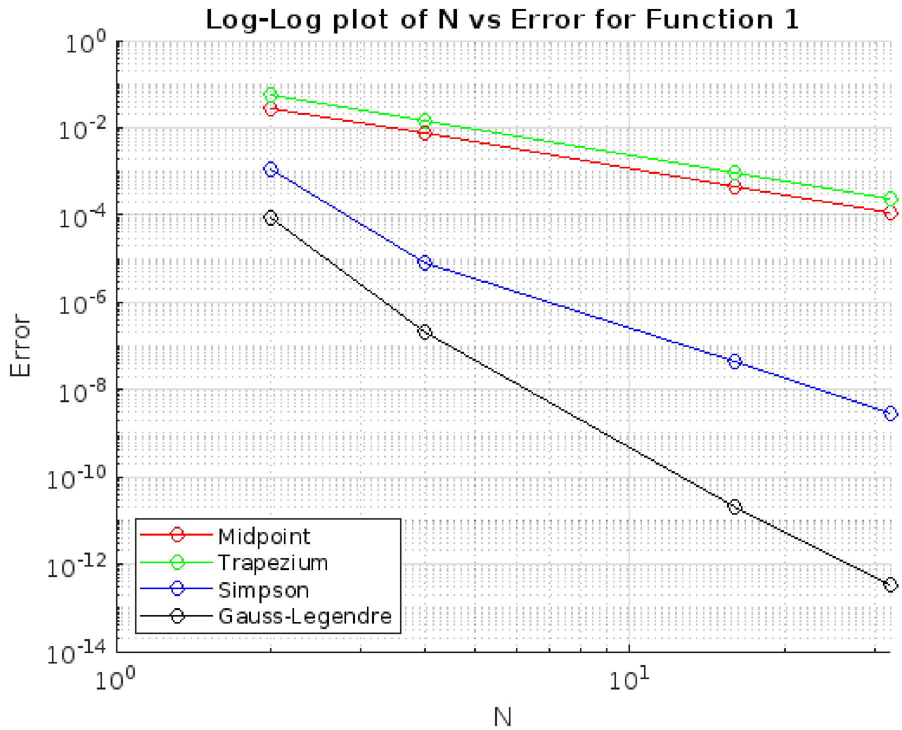

Figure 1: Error of Question 1a.

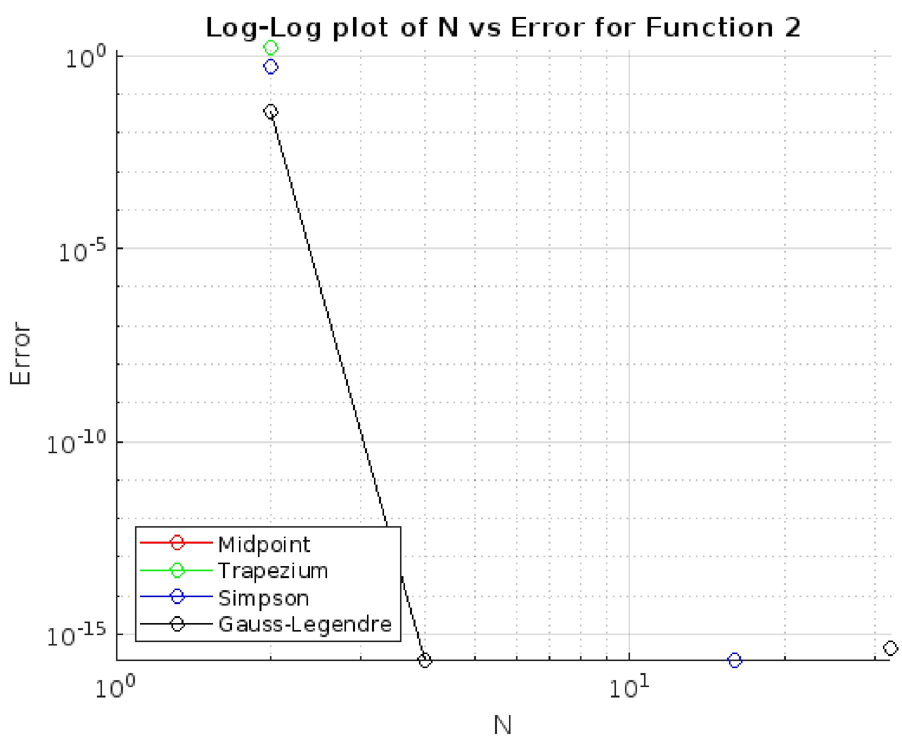

Figure 2: Error of Question 1b. Note that due to the fact that the error goes to zero very quickly for the different methods by chance means this plot doesn't look like the others.

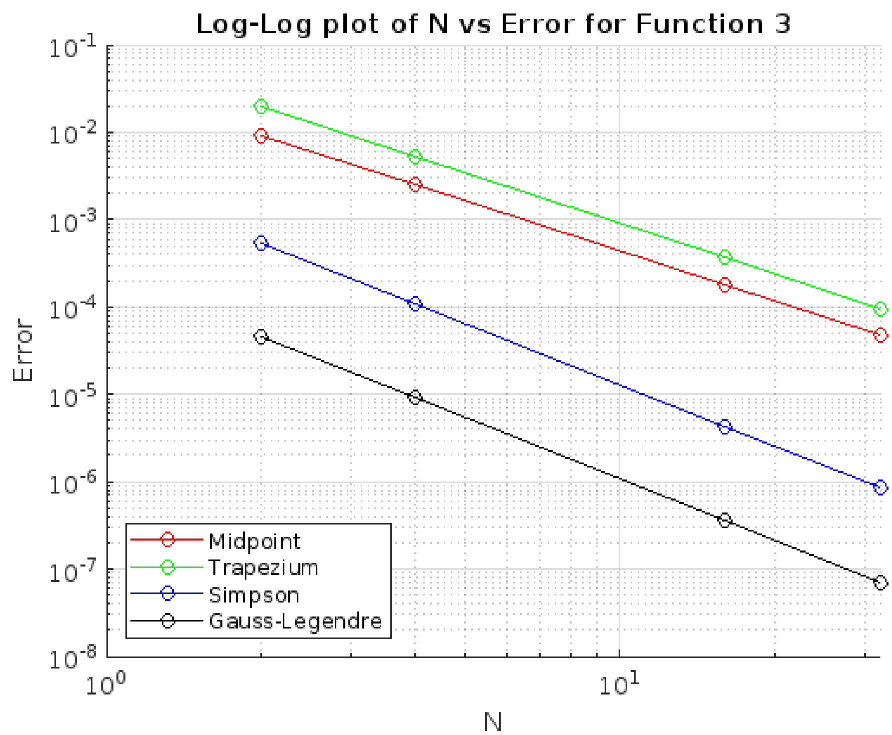

Figure 3: Error of Question 1c.

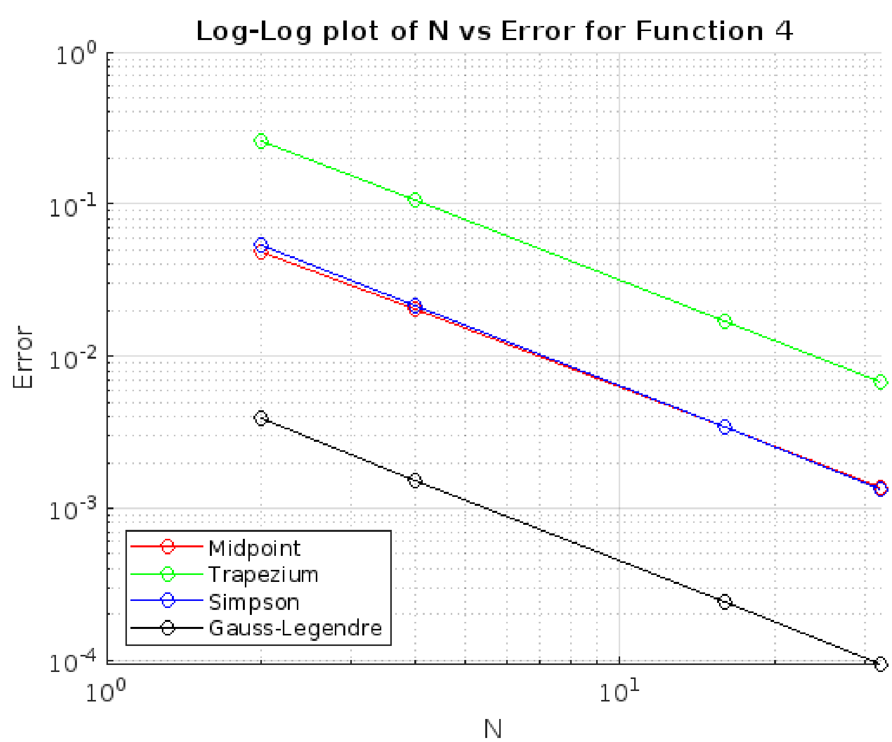

Figure 4: Error of Question 1d.

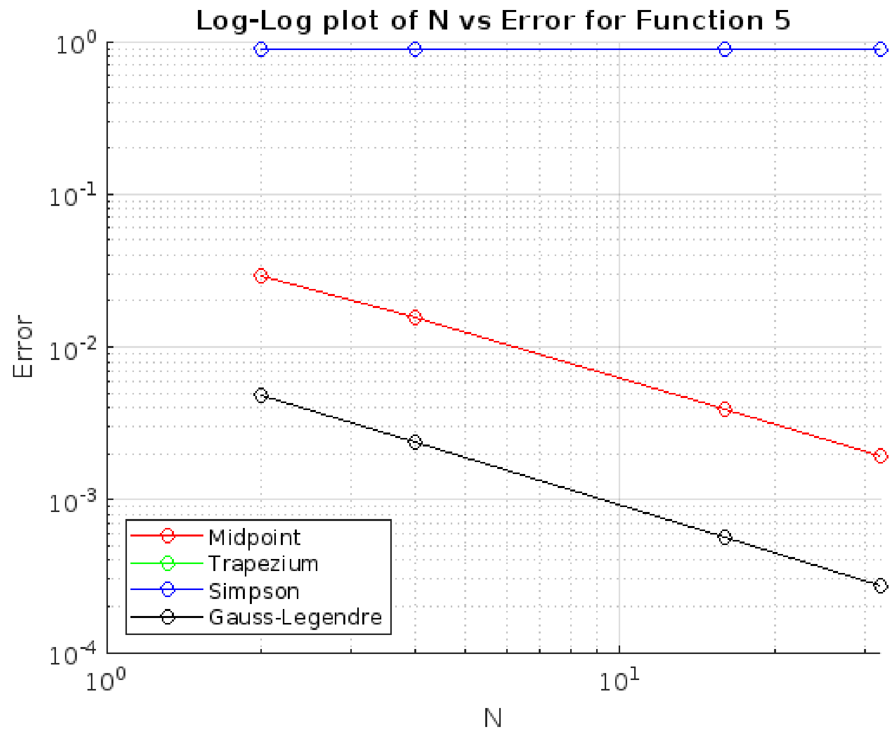

Figure 5: Error of Question 1e. Ignore the error for trapezium/Simpson, they were set to 0 in the code so had a constant error.

Question 2. Using the given asymptotic expansion for the Trapezium rule error, we get

$$I(0) - I(h_{s+1}) = I(0) - I(\frac{1}{2}h_s) = \sum_{i=1}^{\infty} \frac{1}{2^{2i}} c_i h_s^{2i}$$

$$\implies 4I(\frac{1}{2}h_s) = 4I(0) - \sum_{i=1}^{\infty} \frac{1}{2^{2i}} c_i h_s^{2i}$$

$$\implies I(0) = \frac{4I(\frac{h_2}{2}) - I(h_2)}{3} + \sum_{i=2}^{\infty} \frac{2^{2i}-1}{3 \cdot 2^{2i}} c_i h_s^{2i}.$$

Define $a_s^{(1)} = I(h_s)$ and $c_i^{(2)}$ as in the question. Then simply rearranging the above formula algebraically, we get

$$I(0) - \left(I(\frac{h_2}{2}) + \frac{I(\frac{h_2}{2}) - I(h_s)}{3} \right) = I(0) - a_{s+1}^{(1)} - \frac{a_{s+1}^{(1)} - a_s^{(1)}}{3} = \sum_{i=2}^{\infty} c_i^{(2)} h_s^{2i}.$$
